

Statistical Analysis Plan (SAP)

Study Design

Cross-sectional exploratory online survey.

Statistical Software

Statistical analyses were performed using IBM SPSS Statistics version 29 (IBM Corp., Armonk, NY, USA). Data cleaning and verification were additionally performed using Microsoft Excel and Python (Pandas library).

Population for Analysis

Raw Dataset

N = 300 responses

Eligibility Criteria

Included:

- Syrian adults
- Age ≥ 18 years
- Electronic informed consent

Excluded:

- Age < 18 years

Final Analytical Sample

N = 287

Data Cleaning Procedures

1. Verification of age eligibility.
2. Removal of respondents younger than 18 years.
3. Screening for duplicate entries.
4. Screening for missing demographic data.

5. Verification of response consistency.
-

Descriptive Analysis

Categorical variables:

Reported as:

- Frequency (n)
- Percentage (%)

Continuous variables:

Not applicable in the current dataset.

Exploratory Inferential Analysis

Pearson Chi-square tests:

1. Healthcare background × Herb–drug interaction awareness
2. Educational level × Belief that natural products are completely safe
3. Healthcare background × Use of herbs without professional consultation
4. Healthcare background × Interest in Arabic digital resource

Statistical significance:

$p < 0.05$

All analyses considered exploratory and hypothesis-generating
